GhostBar

Complete Setup Guide

Read this before doing anything else.

Support: ghostbarapp@gmail.com

What is GhostBar?

GhostBar is a Mac app that puts a Google Gemini AI chat panel on the side of every website you open. You can ask it anything — summarize this page, explain this, solve this problem — and it answers instantly without you leaving the page.

Think of it like having a genius friend sitting next to you while you browse the internet. The friend can read whatever is on your screen and answer any question about it.

> ⚠️ GhostBar only works on Mac. It does NOT work on Windows, iPhone, or iPad.

Quick Start Checklist

Before you start, make sure you have all of these:

- A Mac computer (any model from 2018 or newer)
- macOS 12 or later — not sure? Click the Apple logo in the top left corner → About This Mac → check the version number
- Google Chrome, Firefox or Safari browser installed

- A Google account — if you have Gmail you already have one
- Your GhostBar license key — check the email sent to the address you used on Gumroad

🚨 **Your license key was sent to the EMAIL ADDRESS you used when you paid on Gumroad. Check that inbox first. If you don't see it after 5 minutes, check your spam folder. Still nothing? Email ghostbarapp@gmail.com**

💻 STEP 1 — Install GhostBar on Your Mac

macOS automatically blocks apps downloaded from the internet that are not sold through the Apple App Store. This is Apple's security system. GhostBar is safe — but you need to do ONE extra step using Terminal to tell your Mac it is allowed to open.

How to open Terminal — 3 ways:

Method 1 — Keyboard shortcut:

1. Find the CMD key on your keyboard — it has this symbol on it: ⌘ (usually next to the space bar)
2. Hold CMD and press SPACE at the same time
3. A search bar appears in the middle of your screen
4. Type: terminal then press ENTER

Method 2 — Use the magnifying glass:

1. Look at the top RIGHT corner of your screen — find the magnifying glass icon
2. Click it, type: terminal then press ENTER

Method 3 — Find it manually:

1. Click Finder (the blue smiley face in your dock at the bottom of the screen)
2. Click Applications in the left sidebar
3. Find the Utilities folder — double click it
4. Find Terminal (black square icon with >_ symbol) — double click it

> ✅ A black window appeared with white text and a blinking cursor? That is Terminal. You are ready.

Run the install command:

> 🚨 **The command below is ONE single line. Copy ALL of it at once. Do NOT press Enter halfway through it.**

1. Make sure your downloaded file is named GhostBar-1.4.0-arm64.dmg and is in your Downloads folder
2. Click inside the Terminal window
3. Copy the ENTIRE command below — select it all then press CMD+C:

COPY THIS ENTIRE LINE (it must stay on one single line):

```
xattr -cr ~/Downloads/GhostBar-1.4.0-arm64.dmg && open ~/Downloads/GhostBar-1.4.0-arm64.dmg
```

4. Paste into Terminal by pressing CMD+V
5. Make sure it appears as ONE line — not split across two lines
6. Press ENTER — the GhostBar installer opens automatically

> ⚠️ If Terminal says 'No such file or directory' — the DMG is not in your Downloads folder. Make sure it finished downloading first.
>
> ⚠️ If your Mac asks for a password when running the command — type it and press ENTER. You will not see the letters appear. This is normal.

Finish installing:

1. The installer window opens showing GhostBar on the left and an Applications folder on the right
2. Click and HOLD the GhostBar icon then DRAG it onto the Applications folder
3. Wait for the progress bar to finish — about 10 seconds
4. Close the installer window — click the red circle in the top left corner of the window
5. Open Finder → Applications → find GhostBar → double-click it

> ✅ GhostBar is now installed. You will NEVER need to open Terminal again. From now on open GhostBar the same way you open any app.

🔑 STEP 2 — Enter Your License Key

When GhostBar opens for the first time you will see a purple screen asking for a license key.

> 🚨 **Your license key was sent to the email address you used when you purchased on Gumroad. Open that email now before continuing.**

1. Open the email from GhostBar — your key is inside
2. Your key looks like this: GHOST-XXXX-XXXX-XXXX-XXXX
3. Select the entire key and copy it (CMD+C)
4. Go back to GhostBar — click inside the license key box
5. Paste your key (CMD+V)
6. Click the purple Activate button
7. You will see a green success message — you are activated!

> ✅ Your key is locked to your Mac. If you delete GhostBar and reinstall later, enter the same key and it will work instantly.
>
> ⚠️ Each key works on ONE Mac only. Do not share your key with anyone else.

🤖 STEP 3 — Get Your Free Google Gemini API Key

GhostBar uses Google Gemini AI. You need a free API key from Google — think of it as a password that lets GhostBar talk to the AI on your behalf. Takes 2 minutes. No credit card needed.

> 🚨 **Do not skip this step. Without an API key the chat will not work at all.**

1. Open your browser and go to: aistudio.google.com
2. Sign in with your Google account
3. Click Get API key on the left side of the page
4. Click Create API key → then Create API key in new project
5. A long key appears starting with the letters AIza — click the copy button next to it

6. Go back to GhostBar — click the Gemini API Key field
7. Paste the key (CMD+V) then click Save

> ✅ A green tick appeared next to the field? Your API key is saved and working.

▶️ STEP 4 — Start GhostBar and Use It

Starting the AI sidebar:

1. In the GhostBar window click the big green Start button
2. The status circle turns green — GhostBar is ON
3. Open your browser and go to any website
4. The GhostBar AI chat panel appears on the RIGHT side of the page

> ⚠️ First time only: your browser may show a security certificate warning. Click Accept or Proceed — this is required for GhostBar to work.

Chatting with Gemini:

1. Click inside the text box at the bottom of the GhostBar panel
2. Type your question — for example: What is this page about?
3. Press ENTER — Gemini answers in a few seconds
4. Keep asking follow-up questions — GhostBar remembers the conversation

Copy Page — capture the whole webpage:

Copy Page is the most powerful feature. It captures everything on the current page — text, math formulas, diagrams — and sends it all to Gemini so you can ask questions about it.

1. Open any article, textbook page, or document in your browser
2. Click the Copy Page button in the GhostBar panel
3. Wait 2-3 seconds for the page to be captured
4. Type your question — for example:
   → Summarize this in 3 bullet points

→ Explain the main concept simply
→ Solve the problems shown on this page

> ✅ Copy Page works with math, LaTeX, diagrams and images. Perfect for studying and research.

Stopping GhostBar:

1. Click the red Stop button — the AI panel disappears from your browser
2. To hide the GhostBar window — click the red circle top left. GhostBar keeps running in background
3. To FULLY quit — press CMD+Q, or right-click GhostBar in the dock and click Quit

> ⚠️ Clicking the red X only hides the window. Use CMD+Q to fully close GhostBar.

Optional — Upgrade to Paid Gemini Tier

You do NOT have to do this. GhostBar works perfectly on the free tier. But here is why you might want to upgrade:

Free tier:

- 15 requests per minute — if you ask too fast you get a rate limit error
- Uses Gemini Flash — fast but less detailed answers
- Cost: FREE forever

Paid tier:

- 1000+ requests per minute — you will never hit a limit
- Smarter model — better, more detailed answers
- Cost: about $0.001 per question — most people spend less than $1 per month
- Google gives $300 FREE credit when you add a card — covers roughly 300,000 questions

> ✅ GhostBar detects your tier automatically. Just upgrade Google billing and GhostBar switches to the better model on its own.

How to upgrade:

1. Go to aistudio.google.com — click on your API key
2. Click Enable billing
3. Add your card — Google applies $300 free credit, you will NOT be charged
4. Done — GhostBar detects the upgrade automatically

Something Not Working?

AI panel not showing in browser

- Click Stop then Start again in GhostBar
- Refresh the page with CMD+R
- Make sure you clicked Accept when browser showed the certificate warning
- Close the browser completely and reopen it

Terminal says 'No such file or directory'

- The DMG file is not in your Downloads folder
- Open Finder → Downloads and check the file is there
- If not, go to Gumroad and download it again

Rate limit error in chat

- You sent too many messages too fast on the free tier
- Wait 60 seconds and try again
- Upgrade to paid tier to never see this again

License key not working

- Copy the FULL key including all dashes: GHOST-XXXX-XXXX-XXXX-XXXX
- No spaces before or after the key
- Got a new Mac? Email ghostbarapp@gmail.com to transfer your key

Did not receive license key by email

- Check the email address you used when paying on Gumroad
- Check your spam or junk folder

- Wait 5 minutes — sometimes delayed
- Still nothing? Email ghostbarapp@gmail.com with your Gumroad order number

---

Privacy & Security

- ✅ All AI requests go directly from your Mac to Google — GhostBar never sees your conversations
- ✅ GhostBar never reads your passwords or payment information
- ✅ Banking and financial websites are automatically skipped
- ✅ Your license key is stored encrypted on your Mac
- ✅ We never collect or sell any data

Need Help?

We respond to every email within 24 hours.

📧 **ghostbarapp@gmail.com**

When you email us please include:

- The first 8 characters of your license key
- What you were doing when the problem happened
- What error message appeared — take a screenshot if possible
- Your Mac model and macOS version — click Apple logo → About This Mac

---

Thank you for using GhostBar!
